

Essay

Thoughts on God's Creations

Domadal Pramod*

Salalah College of Technology, Salalah, Sultanate of Oman

ABSTRACT

This essay discusses the metaphysical science in God's creations. Nature is made up of five elements, Body is made up of nine gates, Soul gives life to the body, Pray to God for giving me as human body on this earth.

Key Words: God, Soul, Creation, immortal, invisible, visible, Earth.

We can make robots, but we can neither create life nor can we make it eternal. All visible things are momentary but all invisibles are eternal in this Universe.

The Soul is a spirit or spiritual concept which is highly debatable as per the different theories. However, some believe that the Soul is immortal and we pray "May the Soul be rest in peace". The way the Sun, situated at one place illuminating the whole Universe by light, so the Soul, situated in the heart illuminating the whole body by consciousness. The body becomes unconsciousness if the Soul disappears from the body. Then our prayers are for the Soul to be rest in peace.

This conceptual axiom may be contemplated and perceived as type of electromagnetic radiation, energy wave pocket-Photon. It can neither be created nor destroyed. But the Soul takes birth from one form to another for generations. We cannot remember the passage of the soul, since our memory is designed for infinite forgetfulness and finite remembrance. Otherwise it would have been a great catastrophe.

He has created a beautiful city, human body with a complex network having nine gates-two eyes, two ears, two nostrils, one mouth, the anus and the gentile. The multifarious anatomy is intricately organized with a proper network of biological impulses under the control of one - Mind. The authoritative nine gates act like powerful sensors, respond spontaneously for keeping the body intact for optimal conditions against any harmful microscopic particles which try to disintegrate their city for which they are made in the body.

He has created humans as one of the most intelligent creatures out of eighty lakhs of entities for a momentary period on this earth.

He creates an optimal weather condition for us and home environment “Water Anomaly” for marine organisms. He safeguards us from all invisible and harmful electromagnetic radiations from outer space by providing “Ozone layer” a splendid blanket over the planet, the earth.

He has created vacuum in the universe so that his children are not to be disturbed by the external noises occurring in the space, but allows the light to penetrate through it for visibility.

He has provided the secrecy for our voices and diminishes its intensity over the space and time. However he has allowed our voices to pass for longer distances for longer period over electromagnetic carrier waves.

He has created the mother planet, the earth so elegantly that it affectionately attracts everything which flies unwillingly against its gravitational field. But she never fails to protect them once their momentum and energy is completely exhausted. It is similar to our children who fly as long as they possess energy after that they return quietly to their sweet homes to sleep in their mother's lap.

The Tsunamis and Cyclones take place to balance the ecosystem which is encroached and destabilized by us. They are similar to the blowing of air, with high intensity vacuum cleaners or brooms which expel the insects and bugs, uninvited guests.

The world exists because of force of attractions. The love and trust unite the countries, the people, the families and the organizations whereas the hatred leads to divorce.

Being tenants, we have to pay rent and have to pay in the form of love and serve the society through our profession. Shower your sympathy and love on all as if “today is the last day on this Earth”.
