

Mystical Experience

God's Cosmic Order & Gift of Peace (Part II)

Robert Campbell*

Abstract

My comic experience presented a clear distinction between the observed Veil of Form and perception of the physical reality made of atoms. The Forms of external experience were experienced as a transparent veil in relation to the vast boundlessness of the Void. It was presented this way because I was in a direct one to one relationship with God which transcends the Void and the entire physical world. The physical world was not directly relevant to the experiences shared with God. The veil of form was a unique creation of my mind from my personal perspective shared with God that was distinct from physical atoms. The veil of forms came and went depending on the intensity of the experiences explicitly orchestrated by God. The veil nevertheless gave the experiences context. God visually demonstrated complementary resonant patterns and the Void was polarized. I was filled with His presence and the one word "God." At His will the archetypal Jesus appeared above me as a harmonized life sized energy pattern outlined in glowing light. It descended into me, paused, and passed through me. It left me with a feeling of profound peace.

Part II of two-part article includes: Social Implications and Facing Death; The Terms of System 3 in Human Activities; Another Look at how System 3 Transforms; Another Look at how System 3 Transforms; Expressive and Regenerative Modes; Biospheric Resonance; Approaching System 4; The Universal Hierarchy of System 4; The Skeleton of System 4; The Archetypal Jesus; and A Related Event.

Keywords: God, revelation, cosmic order, veil of form, gift of peace.

Social Implications and Facing Death

There were some awesome realizations associated with deciphering the Universal Terms as they related to the Particular Terms. To have the identity between Form and Void demonstrated by the Supreme Being is itself an awesome experience. It is also a private experience. However translating this into the realm of Atomic Physics and Cosmology brings it into the public domain. It becomes a new approach to the whole of science that modifies and reinterprets the work of giants such as Planck, Einstein, de Broglie, Bohr, Schrodinger and other founders of modern physics. Moreover it goes beyond the physical sciences to the biological sciences, to the human nervous system, to the workings of the brain, and evolution theory. The immensity of it and its possible consequences began to dawn more fully on my rational left brain intellect.

*Correspondence: Robert Campbell, Independent Researcher. <http://www.cosmic-mindreach.com> E-Mail: bob@cosmic-mindreach.com Note: This article is adapted from Chapter 5 of my book entitled "God Reveals the Cosmic Order" which is available at Amazon.

Language began to come into it that bridged the two hemispheres of the brain. That made it a humanly holistic experience with profound social significance for the future of human civilization. What was this task that I began for the sake of my personal understanding? I had to make sense of that first cosmic experience and those that followed to this point for the sake of my own mental balance. But the potential social consequences were profoundly scary.

Who was I to let loose on the world the contents of this Pandora's Box in explicit language that challenged everyone's cherished beliefs in addition to the foundations of all of the sciences? I had no intention of writing a book for publication. I disliked writing. But the hand written pages were piling up. Could I or should I keep it a secret? The last thing I wanted was to become the focus of global scrutiny if I ever published a book. I had been working at it every waking hour, sixteen hours a day. It was on my mind all the time. I had quit my profession with disregard for my financial and social future. The tension in my mind, although tolerable, opened my perceptions into the dynamics of the whole of creation as I searched constantly for language. But I was suddenly stricken with the possible social consequences. It wasn't personal any more.

The ragged energies of our normal social milieu are cataclysmic in their implications. The Suffering Face of Humanity is at serious risk and facing impending disaster. The more I found language the more I felt this impact. This work was not some intellectual contrivance of mine in left brain language that I could pride myself on in the academic community. It was not an academic exercise. It was profoundly real in a cosmic sense.

I was like the Pirahã natives in the Amazon¹ who will believe nothing unless it comes from direct personal experience and who thus have no history beyond living memory. It concerned the direct revealed experience of Supreme Reality and it embraced the whole of space and time. It was not a belief contrived in language that I or anyone could disagree with. There were no alternate structural possibilities. It affected every human being on the planet. And who would believe that all of this came directly from God? I would be socially crucified. Jesus was physically crucified for similar reasons. Everyone has culturally conditioned private belief systems based on language that they believe is true for everyone. People are not receptive to having their frameworks of understanding threatened whether they are real or not. They are the basis of their perceived reality.

There were spells when I was stricken by fear at the universal implications of what I was doing. Those awesome hemispheres were trembling on the verge of instability and I could not avoid some personal responsibility for that slender sliver of light holding them in balance. I would drop the work and go for a walk along the lonely road by the lake. It was overhung with trees with no houses or traffic and there was a marshy area where the frogs croaked at night. In the day time there were birds and the sound of waves against the shore. It helped to connect with nature.

There was a pub in a village area not too far away where I went once just to be near people. I was sitting at a small table slowly sipping a glass of beer. It was a busy place where young

¹ <https://indiancountrymedianetwork.com/news/the-amazons-pirah-peoples-secret-to-happiness-never-talk-of-the-past-or-future/>

people met. I was tall, fit, reasonably handsome, and although 38 I could pass for a decade younger. I was soon talking with an attractive young woman who sat down across the table. My mind was open to the whole cosmic order and I struggled to carry on a normal conversation. The subject matter was far removed from my cosmic concerns. After a few minutes she felt uneasy and returned to sit with her friends. I felt badly that I had caused her to feel uncomfortable and I left the pub shortly afterwards. I was outside the pale of humanity.

Several times during this period of deep concern over the universal implications of what I was doing I would find myself reduced to a heap on the floor of the cottage. Crippling energies immobilized me. They rendered me helpless on the floor gazing into dark energies of the Void which lost much of its silvery sheen. I lay there for several hours at a time, anticipating death. I was facing death, expecting it any moment. There was no fear or trauma associated. The Supreme Being sustained me there on the brink of death.

Each time it happened there was no possibility to rationalize that it had happened before. Each time I was facing the reality of imminent death without trauma or upset. Then after a few hours it would suddenly be over. I would feel refreshed as if there had been a correction. I would spend a day or so in quiet reflection or reading then return to the task with a slightly different perspective on what I was working on at the time. It happened both when I was working on System 3 and later when I was working on System 4.

The Terms of System 3 in Human Activities

I had initially conceived of System 3 in terms of human activities and I will review it again from this perceptive in the hope that it will clarify a few points. The Means, Goal and Consequence triad that had fired my mind initially had to resolve into two alternate modes if it is to be consistent with System 2. System 3 had to be a nested structural elaboration of System 2 to satisfy the requirements of Universal Wholeness. I came to realize that the Means term had two Universal aspects that worked coherently together with the Goal and Consequence and that this was related to System 4 also.

The Goal and Consequence are the two Particular Terms described above and represented in both top and bottom of Figure 5. In a cosmic sense the Goal of all activity is to reconcile the Universal Inside with the Universal Outside. We have subjective ideas Inside that we strive to realize through our objective commitments to behaviour Outside. In language that I adopted later the Routine and the Form are coalesced as the content of the Idea implicit in the memory. This coalesced triad is a quantum element of technique. The memories of how we thus make our commitments are coalesced as quantum elements of the Void. This is illustrated by the Particular Set in the top half of Figure 5.

The System 3 memories are subject to recall into Form where the three active interfaces of Idea, Routine and Form are mutually separate yet intimately linked. This is illustrated in the bottom half of Figure 5. We remember how to walk and talk and drive a car. Once they are learned we can recall and repeat them in any context. We have an Idea and express it through a Routine of talking to give the Idea explicit Form that others can understand. Or we express the Idea as a

Routine of action such as walking that gives Form to our trip to the corner store. I came to understand this intuitively without these same words. My intuition was guided by the first intense cosmic experiences that were seared in my mind.

Another Look at how System 3 Transforms

All primary hydrogen atoms behave the same. About three quarters of the universe is hydrogen. The synthesis of the higher elements takes place through nuclear fusion in the centers of stars through a secondary System 3² that is synchronous with the primary System 3.

Primary hydrogen is the largest atom and the lightest of all the elements. When they fuse to produce Helium and so on the volume of each heavier atom contracts space. Space is defined by the internal spherical volume of the primary atom with respect to the external linear distance that light can transmit in each still frame. This fixed distance is a quantum element of space. There is no other universal measuring rod out there. It is about 4.56 ten millionths of a meter. Each still frame defines a Primary Interval of Time that is easily calculated as 1.519×10^{-16} seconds consistent with zero angular orbital momentum in the first hydrogen orbit.

Biological evolution is nested within the physical creation on planets that happen to have conditions suitable for life. This structurally corresponds to System 4 which is a nested elaboration of System 3. System 3 concerns the cosmic evolution of the physical universe. System 4 concerns biological evolution nested within the physical universe.³ The evolutionary process is not an emergent property of physics as mainstream science would have us believe.

The One unique Universal Term of System 3 has universal access to the energies of the Void. It assimilates and recalls the quantum energies of the Void into physical Forms such as atoms, molecules, suns and planets. There is enormous momentum behind the process that renders it virtually automatic. The heavens are dominated by cyclic motions that perpetuate their orbs within orbs in largely predictable patterns that are accessible to mathematical treatment except on a cosmic scale. The Supreme Being and cosmic order are not reducible to algorithm.

The Universal Term illustrated by the Universal Set in the top half of Figure 5 prescribes a time-like progression from *Idea to Routine to Form*. The collective Universal Idea, Center 1, is All the Particular open Photon energy interfaces that are the conjugate reciprocals of all atoms in the universe together with Systems 4 and higher memory Terms nested within the universe. The Center 1 of the Universal Set in the top half of Figure 5 thus embraces All as a boundless unity. In this sense it *is* the Void.

With the time-like progression to *Routine(2)* in the top half of Figure 5 this Universal Term routinely transforms into the alternate Universal Term in the bottom half of Figure 5. On a

² <http://www.cosmic-mindreach.com/Cosmology.html>.

³ <http://www.cosmic-mindreach.com/Three-Brains.html>.

cosmic scale this happens very quickly, more than ten million billion times a second,⁴ consistent with the Primary Interval of Time. The Universal **Form(3)** interface turns around in the bottom half of Figure 5. It perceptually transposes to face the **Routine(2)** interface that has the **Idea(1)** interface inside it facing back at the **Form(3)** interface. The Routine interface thus identifies the Idea inside it with the Form outside it.

In other words the sequential time-like sequence of the one Universal Term gathers appropriate quantum energies from the Void for the next still projection of Form then it transforms into the alternate Universal Term that defines a subjective aspect distinct from an objective aspect. This Term coheres with the three intimately related Forms of the Particular Terms linking them in pairs as in the bottom half of Figure 5. It thus defines a Universal Inside and a Universal Outside to each closed member of each triad everywhere at once.

The Inside and Outside are balanced between the three members of the triad and the triad of Form is balanced with the quantum equivalent. The awesome Cosmic Hemispheres from which all creation derives are balanced accordingly.⁵

In a human activity this provides a means of using a Routine to make the Form with feedback from the Form to the Idea. The Idea achieves an identity with the Form via the Routine. The artist uses the Routine of applying paint to the canvas until the Form taking shape on the canvas matches his Idea. The sculptor uses a Routine of chipping away at the stone until a Form emerges consistent with his Idea. Human actions are structurally self-similar with cosmic actions.

Expressive and Regenerative Modes

In a couple of months I had the skeleton of System 3 outlined, although refinements to it relating to details of Atomic Theory, Cosmology and Quantum Relativity came much later. I realized however that there had to be synchronous secondary and tertiary homologues to the primary System 3 to account for fusion processes in the centres of stars that create the elements heavier than hydrogen and also to create the molecular chemistry associated with planets. I began to see that there had to be a Regenerative Mode to Systems 3 and 4 as well as an Expressive Mode.

For example things that we use in daily life need maintenance and eventual replacement. We have to clean, repair, and at some point replace clothing, buildings, cars and so on. We use them to give Expression to our lives but as the need arises we need to Regenerate them. I thus chose these two words to describe two modes to both System 3 and System 4.

I did not fully realize how this worked with the atom yet, but I knew it was associated with the neutron. The neutron is essentially a primary atom of hydrogen that is collapsed into a neutral particle the same size and very slightly heavier than a proton. They are in the nucleus of all the

⁴ The Primary Interval of Time is 1.519×10^{-16} seconds. It derives from the basics of atomic theory at http://www.cosmic-mindreach.com/Atomic_structure.html.

⁵ A diagram of the hemispheres is shown in the article at http://www.cosmic-mindreach.com/Cosmic_Insight.html.

heavier elements in numbers equal to or greater than the number of protons. In neutrons the **Routine**(2) interface turns around or transposes such that it contains the **Form**(3) interface and faces the **Idea**(1) interface. It thus has two down quarks and one up quark. This collapses a primary atom of hydrogen into a neutron. In doing so it collapses the internal spherical space of the atom by fifteen orders of magnitude. That is 1,000,000,000,000,000 times. This dimension is related to the reach of the so-called strong force that holds atomic nuclei together. It also defines the space of the proton.

Neutron numbers increase in the heaviest elements that have an unstable nucleus. More are needed in the Regenerative Mode to hold the larger nuclei together. Although I had a general grasp it was years later before I detailed how and why fusion and fission processes worked this way and how it related to a new approach to cosmology that necessarily follows.^{6,7}

Living processes prescribed by System 4 also have Expressive and Regenerative modes. A plant Expresses itself by growing from a seed. It blooms, goes to seed, and then it dies. Its decayed body fertilizes the earth after it reseeds itself. The degenerate process of aging and death is regenerated. The seed is the germ of a new plant. This is similar in a way to how the neutron is essentially a compacted atom that contracts space and time to assist in the creation of heavier atoms. The seed is a Regenerative Mode of the whole plant. The neutron is a Regenerative Mode that is essential to the creation of heavier elements.

Regenerative Modes exhibit specific structures such as neutrons or seeds. They are not always easy to identify and our left brain language hemisphere has a creative flair. We have a natural tendency to try to bridge the gap between Self and Other with language. It makes us feel whole. And that feeling of unity can be very seductive in a variety of ways that can lead us astray, just as the feeling of sexual union can lead people down the garden path if they are not careful. It does not have to be that way of course. There are just social implications.

Even though I was suspicious of language and very cautious about assigning words, there were times when I wandered off the track or came to an obstacle. Although my mind was open to the whole cosmic order, language still tried to have its exclusive way sometimes. The transverse tension gave me intuitive access but I needed words.

On a few occasions I would find myself reduced to a heap on the floor by crippling energies again. I was held there for hours at a time gazing into the Void and facing imminent death without fear or trauma. It always ended leaving me feeling refreshed. Then after a short spell of reflection things began to fall better into place.

It was nevertheless years before I discovered how specific structures in the human nervous system anatomy accommodate Regenerative Modes in behaviour. These structures, including neuromuscular spindles, the vestibular kinocilium, and others allow a simulation of corrective action that anticipates a future result. In fact our cerebral capacity to draw on memory to formulate future plans in language is regenerative. This allows the human nervous system to

⁶ http://www.cosmic-mindreach.com/Atomic_structure.html.

⁷ <http://www.cosmic-mindreach.com/Cosmology.html>.

span and integrate past and future, space and time. We are more than behaviourally conditioned robots. The anatomy of neuromuscular spindles was researched in the late 19th century and yet this Regenerative capacity to simulate a desired action sequence in advance of enacting it is still not recognized. The current paradigm of science inhibits it.

Biospheric Resonance

On one of the disturbing occasions when I was puzzling over the Universal implications of System 4, I went for a walk along the lonely road by the shore. It was late at night. I found the global implications disquieting. I was just walking along for some peace with the croaking frogs in the swamp lending some background. It is fine to have one's mind in the cosmos as long as one's feelings are grounded with one's feet on solid Earth.

My feet suddenly stopped and I was gazing into the awesome Void with my intuition controlled by God as always. It was a familiar beginning to another awesome demonstration. The quantum energies of the Void bifurcated into an enormous sphere that I intuitively knew represented the planet Earth. I was looking at the huge grey sphere as if suspended in space with the top of the sphere slightly above eye level. The veil of form was still slightly visible a little behind the mid coronal plane through my body as I stood suspended on the lip of eternity with the planet represented in front. Then very complex energy transformations began on opposite sides of the planet near the bottom and rose around the periphery of the planet toward the top. It was a progressive historical representation.

The energy transformations complemented each other on opposite sides of the planet. The complements were very complex in the way they worked. They involved the whole evolutionary process on the planet as the biosphere biologically and culturally evolved from the beginning. It was historically represented from the bottom of the planet with the energies on opposite sides moving progressively toward the top. The complementary patterns on opposite sides of the planet were balancing and integrating historical events. Many complementary events were implied and a few were intuitively indicated as specific examples. The message was the process of how the biosphere of the planet resonates as an operating field for the whole evolutionary process. I called it Biospheric Resonance.

For example the linear Indo-European languages of the West are complemented by the holistic Sino-Tibetan languages of the Far East that evolved with the human migration out of Africa, while the sub-Saharan language have characteristics of both.⁸ I also later discovered a host of biological complements in the natural and fossil record. For example the marsupial mammals of Australian have placental counterparts that have influenced their mutual evolution even though they have not evolved from common ancestral stock. The sea cow of America is similar to the dugong of Asia even though they are unrelated, and so on. The conquests that established the Persian Empire from the East for two centuries were reversed by Alexander the Great from the West for two centuries. The Muslim conquests Eastward were reversed by the Mongol conquests Westward. There are many examples of complementary patterns in a variety of ways that

⁸ http://www.cosmic-mindreach.com/Language_3Races.html

exploited the exploration of the operating field of the planet. The individualistic capitalist Western mentality was balanced by the Eastern collective mentality of communism, and so on. This tangled complexity of complementary patterns that evolved on opposite sides of the planet moved up and met at the top of the planet into a searing seam of bright light that projected straight up into the heavens as far as I could see. The complementary patterns are being historically integrated into a consummate realization of the whole cosmic order. It left me standing there on the lonely road amazed. The frogs were still croaking unconcerned.

It took years to discover some of the many implications of that awesome realization. It is clear that we must bring our three brains to a sustainable balance with one another and with the biosphere. Our spiritual destiny as individuals depends on it, as does the ultimate survival of human civilization. I could sense the fate of the Suffering Face of Humanity swinging in the balance with that glistening sliver of light between the cosmic hemispheres.

This implicitly requires that we must intuitively recognize the Universality of the Cosmic Order and how it works. Only through this Right Brain holistic insight into the nature of Universal Wholeness can we ever hope to individually or collectively bring our Left Brain social commitments into harmony with the cosmic order through which we have emotionally evolved. Our ancestral evolutionary roots are hardwired into our Limbic Brain. The human situation on the planet is irreversibly anchored to this biological fact. No one is exempt. We are responsible for and to the biosphere.

Approaching System 4

System 4⁹ was a major challenge. I was able to illustrate how the active interfaces mutually related as a whole within each Term. This was relatively easy. It was not so easy to see which active interface was which in each Term however. The correct numbering of each Center in each Term was essential. Nor was it easy to see where each Term fit in each of the nine positions. Nor was it easy to see how their mutual relationship implicitly defined the meaning of each Term in relation to the whole. It was yet another challenge to see how the Term transformations of three Particular Sets through the Six Term Sequence meaningfully related to one another, while accommodating both Expressive and Regenerative Modes.

It was essential that the Particular Term transformation sequences had to be regulated by the Universal Term transformation sequences so that they would all work synchronously as a whole. Although it was not initially apparent that there were two Universal Sets, there had to be if System 4 was to be a consistent nested elaboration of System 3. One Universal Set was Primary. And the other Universal Set was Secondary. The Primary Set was Unique or One. The Secondary Universal Set was Many with respect to the One Primary Set. This was a requirement of Universal Wholeness that was a consistent elaboration of both Systems 2 and System 3.

For example I realized later that the Primary Universal Set represents the Archetype of the Human Species, (the Suffering Face) while the Secondary Universal Set is the Personal

⁹ A description of the Terms is at <http://www.cosmic-mindreach.com/System4Terms.html>.

Archetype associated with each Particular Human Being. It applies to any species. In fact it applies anywhere in the universe. The two archetypes cohere together to integrate the Particular Term transformations that relate to the specifics of ongoing circumstance for each person. Chemical signalling between the body's Cells is part of the process but this must be spontaneously and synchronously orchestrated between the body's many Organs according to the distributed energy needs of the Host on demand. This is beyond the reach of chemistry.¹⁰

The Universal Hierarchy of System 4

I had originally called Term 9 the Renewed Perception of the Field because there is always an operating field. This Term is a Universal time-like hierarchical succession with the four active interfaces nested inside one another. This is consistent with the *Idea to Routine to Form* succession in the Universal Term of System 3. The additional active interface in System 4 was designated as **Knowledge** so that *Idea(1) → Knowledge(2) → Routines(3) → Forms(4)*. This is Term 9 as shown in Figure 2a. The four words must be interpreted in context.

At the time I related the hierarchy to four levels in a business organization as follows:

1. The top Manager's Work integrates the Company *Idea*. It gives direction to the
2. **Knowledge** implicit in infrastructure cycles of Administrative Work which directs
3. Supervisory Work with product cycle *Routines* that commit resources to
4. Functional Work with task cycles that result in final *Forms*.

I realized that technical **Knowledge** of how to translate the Company *Idea* into *Form* is invested in the company's infrastructure and this implicitly gives direction to Supervisory *Routines* of committing resources of Equipment, Labour and Material to Product Cycles and this in turn implicitly gives direction to task cycles at the functional level that results in an explicit *Form*. A company hierarchy is more than a series of bosses telling others to do their bidding.

By using these words for each of the four active interfaces in the correct way it was easier to see the meaning implicitly defined in each of the nine Terms. It was essential that the active interfaces were numbered correctly in each Term and that when Centers 1 and 2 exchanged places the Particular Terms changed from Expressive to Regenerative Modes. It is a minor miracle that it works this way, but it does. Always! These words were another breakthrough. At the time however I was somehow able to do it in abstraction, thinking only of graduated levels of active intensity between Light and Darkness. It was difficult work. In retrospect this confirms that the meaning in language derives from the System, not vice versa.

Acquiring language was a very arduous process. Even when words were found that fit, their meaning was context dependent. In a different context different words were needed that had self-similar characteristics. The System must be related directly to sensory perception of phenomenal experience because it is more than an intellectual contrivance. It must find direct confirmation in

¹⁰ How this works was outlined some 35 years later in several articles on Cell Biology. An analysis of how it applies to Gene Expression is given at http://www.cosmic-mindreach.com/Gene_Expression.html.

sensory experience. I was able to decipher it in abstraction because it had been demonstrated visually and experientially. I had a sensory basis to work from that transcended creation.

The Supreme Being could not communicate it in language. It is necessary for a human being to experience and intuitively see how it works. It must have practical relevance in a human context. Those massive Universal Hemispheres must seek Balance between Heaven and Earth through living creative processes. Reality absolutely depends upon it. All creation derives from those awesome cosmic hemispheres implicit in System 2 that require a balance between self and other.

Einstein intuitively knew this, unlike many of his colleagues. *"I see on the one hand the totality of sense-experiences, and, on the other, the totality of the concepts and propositions which are laid down in books. The relations between concepts and propositions among themselves and each other are of a logical nature, and the business of logical thinking is strictly limited to the achievement of the connection between concepts and propositions among each other according to firmly laid down rules, which are the concern of logic. The concepts and propositions get "meaning," viz., "content," only through their connection with sense-experiences. The connection of the latter with the former is purely intuitive, not itself of a logical nature. The degree of certainty with which this relation, viz., intuitive connection, can be undertaken, and nothing else, differentiates empty fantasy from scientific "truth."*(From "Autobiographical Notes," at age 67.¹¹)

Physics has wandered off into a Big Bang bog of conjecture that can never find confirmation in sensory experience of any kind.

The Skeleton of System 4

I had deciphered System 4 but the resulting language was very obscure. Although it was incomprehensible to anyone else I nevertheless had the skeleton of System 4 mapped out, including how the Expressive and Regenerative Modes found mutual reconciliation in the six Term transformation sequences of three Particular Sets.

This resulted in twelve transformation Steps for each Particular Set to complete both Modes. Since the transform sequences of the Two Universal Sets took four Particular Steps to complete this meant that they integrated the Particular Terms in three 4 Step Cycles. Each Cycle contained all twelve Particular Terms but in different Sets.

It was a couple of decades in the future before I was able to show how the human nervous system has evolved to meaningfully integrate phenomenal experience synapse by synapse in precise accord with the three Cycles and twelve sequential Steps of System 4. It hinged on carefully analysing the anatomy of those tiny muscle spindles that are in the parent muscles throughout the body and how the gamma motor neurons of the ventral spinal cord initiate a motor simulation that activates the muscle spindles to simulate an action sequence independently

¹¹ Einstein A., "Autobiographical Notes," in Einstein: Philosopher-Scientist, ed. P. A.Schilpp: Library of Living Philosophers, Evanston, 1949.

of the parent muscle. The muscle spindles actually enact a simulated action sequence independently of the parent muscles and this generates sensory proprioceptive feedback to the spinal cord and brain about the body's anticipated position in space. We can feel a proprioceptive sense of how to act in a certain way before we act.

Figure 7

The Universal Transform sequences are not shown.

For example we feel the rhythm to music urging us to dance in a certain way. Or when we lose our balance we feel a needed corrective action the instant before we take it. A simulated

anticipation of a desired action is a Regenerative Mode that modifies direct stimulus-response behaviour. This gives us a degree of free will that spares us from being conditioned robots.

There are a variety of other ways that Regenerative Modes work in our nervous system apparatus. Indeed language employed by our left hemisphere reasoning abilities simulate long term plans that direct our personal and collective behaviour on a regular basis.

Although I did not have everything worked out yet I nevertheless I had the skeleton of everything that was to follow. Some six years after the first cosmic experience I had all this down on a couple hundred handwritten sheets of paper. There were hundreds more pages in the waste basket. I was exhausted and still had no inclination to actually write a book for others to read. No one else could possibly understand what I had done so far. I had to find better words for my own benefit in any case.

The Archetypal Jesus

I had just finished this difficult task. For many months I had been living and reliving the earlier cosmic experiences that remained very much alive with me. They are still with me daily but assimilated into ordinary experience. My mind had been pried open and I had extraordinary access to profound levels of abstraction that were all embracing, especially during that period of intensive concentration. Those bottomless wells into the quantum energies of the Void and those bursts of knowing were related in ways I cannot describe. I knew what I was doing, but I couldn't say it in language. I nevertheless had gained a few limited words that provided me with a firm beginning.

Immediately after I had finished this task I was sleeping one night on my right side. I was in a deep sleep. I was intentionally awakened by the Supreme Being in the middle of the night. I felt someone gently touching me on my shoulder, like a Father. As I opened my eyes I could visually see a fuzzy dark hand of energy reaching out of the Void to touch my shoulder and waken me. It moved ever so gently like a loving father waking a son. The intuitive impression and feeling of a loving father filled me.

I rolled onto my back with my head raised slightly on the pillow. The silvery gray energies of Void were polarized with steely threads radiating everywhere from a small pitch black area that penetrated through the Void beyond where one corner of the room would be. It was past the invisible foot of the bed a little to my right. The veil of the room was there around the periphery in some manner at first. Everything was under His complete control including every cell in my body. The steely threads permeated me too. Everything was dead still.

Although His presence was visually centered in the pitch black area I also felt His loving presence touch every point in my being. Every fiber of my being became filled with the one word "God." It is the only word that He ever explicitly conveyed to me. It was not a word that I heard. It was not a voice in my head. The word undeniably permeated my whole being. I was filled with it in a loving way, like a father to a son. As usual I could have no personal thoughts, not even the thought that I could not. I could only share in His mind to the extent that He willed.

Then at His Will the archetypal shape of the body of Jesus took form above where the ceiling would normally be, perhaps five meters above me, if distance has any meaning except in relation to my body. It was a little to my left and above where the foot of the bed would be. The veil of the form of the room was gone. The archetypal form of the body of Jesus was portrayed life size. It was not three dimensional although there was a certain indication of depth. It was outlined around its edges in two dimensions by a rim of glowing light. I intuitively knew it was Jesus. His name didn't come the way God identified Himself. I simply intuitively shared the knowledge with God of the identity of Jesus. The archetypal form of Jesus was distinct from God. Jesus was a terrestrial human. God is comic.

Within the form outlined in glowing light I could both visually see and intuitively sense how the archetypal energies of Jesus are organized. There were complex silvery gray energy transformations going on within form of the body that were in immaculately balanced harmony with themselves and with the Will of God. I could visually see this and feel this. I intuitively knew this as I shared the realization with God. Jesus balanced the cosmic hemispheres. Then the archetypal form of Jesus floated down into me like a leaf.

It stopped in an alignment with the mid-coronal plane of my body which I knew was identified with my personal archetype. While the archetypal form of Jesus was aligned in that position within the transparent external form of my body there was a bright coalescence of light between my emotions in the general area of my heart and my left cerebral hemisphere, especially in the motor sensory areas. I could visually see the coalescence of bright light as an active energy pattern that linked my left hemisphere to the emotional area of my heart. I also felt it in this momentary union with Jesus within me. I was still under God's loving control and I simply observed it. As it finished the archetypal form of Jesus passed on through me and disappeared back into the Void. I could visually see it pass through me as if I had total circumferential vision. It was a shared experience with God that was explicitly orchestrated by Him.

It was over then. The room returned to normal. I was wide awake with heightened awareness throughout the experience. As it ended I was filled with a feeling of profound peace. I rolled over onto my left side and went blissfully back to sleep.

It is a difficult thing to interpret. It did not seem to require interpretation. There were no biblical implications that I could tell. I was still not religious in any traditional sense that can be described in language. I was not a church goer and I have nothing against those that are. We each have to find our own way. I do not have to listen to a sermon although I have nothing against doing so. I do not have to believe in God. I know God directly. This does not make me a superior or perfected human being. I still have shortcomings at times that I am well aware of. I am not a messiah. Even the historical Jesus was as common as clay. I was and am the same ordinary man. And this work could not become another belief system. The method of representing the cosmic order has to find direct confirmation in phenomenal experience in both the private and public domains.

It was apparent however that the archetypal Jesus is harmoniously balanced with the cosmic order and with the Supreme Being. In this sense Jesus represents the evolutionary destiny of

humanity if we are to survive as a civilization. There was no indication that everyone must believe that to be “saved” in a dogmatic religious sense. But it did indicate that a harmonious balance with the whole cosmic order is a condition of spiritual sustainability, whatever one’s religious persuasion may be. It obviously follows that this is a condition for a constructive life on planet Earth, or on any planet for that matter. This applies to everyone.

A Related Event

A couple of weeks later, after awakening in bed one morning there was an event that was related to the experience of Jesus. It was brief yet it made me wonder. Everything was transparent in the Void as usual and I was aware of God’s presence. Everything on the right side of my personal archetype turned over so to speak. It was my entire right side to the right of the mid-sagittal plane that separates the left and right sides of the body. In other words it bisected the two dimensional mid coronal plane associated with my personal archetype. The entire right side flipped over 180 degrees. It turned over as if turning a page. That was it. It happened moderately fast.

I did not notice any immediate subjective difference in my normal daily experience, at least in so far as I personally had come to experience life. I was still very sensitive and the task of finding better ways to understand the cosmic order was still with me. I had the basics down however. One stage had finished and another was about to begin. A page had been turned.

Note: If any readers are interested in assisting the author to develop this work please send an email to bob@cosmic-mindreach.com. The work is demanding, especially deciphering how System 5 meaningfully integrates the somatic and autonomic divisions of the human nervous system synapse by synapse. The many articles on my website are simply an introduction to this new universal methodology that can complement traditional empirical approaches to all of the sciences. It is a new paradigm. The work although challenging is a rewarding learning experience.

(The End)
