

Essay

Alien Encounters in Peru & the Quantum Consciousness Model

Raul Valverde*

Concordia University, Canada

Abstract

Recently, several people in Latin America have revealed their encounters with alien races. Many times, these encounters have the purpose of revealing information related to spiritual science, consciousness and cosmology. The quantum consciousness paradigm explains that our consciousness is immortal, non-local and can work independently of the physical brain and supports a multidimensional view of the human mind. This article aims at showing how the teachings of the Alien contactee Antonio Córdova Quezada in Peru support the idea of a unified quantum field and several of the concepts of the quantum consciousness paradigm.

Keywords: Quantum consciousness, quantum physics, scientific God, alien encounters.

1. Introduction

For many years, people have reported alien encounters in Latin America, in particular in Mexico and Peru. Many of these encounters, according to the contactees, are meant to teach us about the origin of human life, evolution and cosmic plans. These models proposed by these encounters seem to be consistent with the human Quantum Consciousness model proposed recently by many scholars (Valverde 2016, Hameroff 1994, Penrose, R., & Hameroff, S. 2011).

The intention of the paper is to present the models discovered through research on contactee Antonio Córdova Quezada in Peru and a comparison of these models with the quantum consciousness model that explains that our consciousness is immortal, non-local, and independent of the physical brain, and which supports a multidimensional view of the human mind.

2. Quantum Consciousness Model

According to quantum physics, the physical world and its reality, is just a product of our observations. We create the world that we experience through our perception of it. In its essential state (atomic or cosmic subquantum micro), the body is made of energy and information, not solid matter. This is energy and information arising from the endless fields of energy and

information spanning the entire universal creation.

Penrose (1994) attacks and almost ridicules those who argue that the artificial intelligence of computers can reproduce human attributes, including consciousness. Penrose, based on the mathematical theorem of Gödel and his subsequent elaborations, concludes that no deterministic system, based simply on set rules, can explain the creative powers of the mind. This nullifies the claim of classic physics, computer science, neurobiology, etc., to structure themselves into a complex deterministic phenomenon of consciousness. Penrose says that only the peculiar characteristics of non-deterministic quantum physics could begin to explain consciousness, within a theory that involved quantum phenomena, macro physical and conditions of non-locality. It is important to note that local conditions are not known in quantum physics, quantum systems are non-local, this means, instant communication instant parts, without being time duration between communication of an event from one point to another system. The model proposed by Penrose proposes a concept of the Universe as "Nonlocal", at the quantum level everything that happens in a corner any of our cosmos is immediately 'felt', "meaning" for any another.

Penrose also indicated that probably is in the microtubules, the microscopic tubes that form the skeleton of cells included in the neurons, where the complicated interactions occur at the quantum level and this gives their "magic" character, "mysterious" from the point of view of science, what we call consciousness.

Quantum physics explains that at the quantum level, particles that come from the same source are entangled regardless of space and time (Hu & Wu 2010). This means that two entangled particles can affect and communicate with each other instantaneously regardless of the space between them. The trend to explain consciousness by applying quantum theories has gained popularity in recent years. In Valverde (2018), we proposed a model based on quantum theory and supported with lab experiments with the seven proposed statements are:

1. What consciousness is able to perceive with its five senses is not reality. Quantum physics has shown that space and time are illusions of perception. Our body cannot really be a reality if it does not occupy most of the space it seems to occupy, quantum physics revealed that the shape of the interior of an atom is almost entirely empty space and that matter is made of concentrated vibrating energy. Time is also an illusion and it represents a sequence of linear events that the brain generates based on perceived energy around every 25 milliseconds.
2. The model proposes that consciousness is non-local and can work independently of the physical brain. Nonlocality or "action at a distance" is the nature of consciousness. Human Consciousness is non-spatial and non-temporal and not in the brain but in prespacetime. Consciousness is multidimensional, it can exist outside the three-dimensional reality.
3. The model explains that we live in a collective consciousness that connects all the consciousnesses of the universe to the supreme consciousness.

4. Consciousness is likely play important roles in quantum effects such as in the wave function collapse, this is the foundation of the reality that we perceive.
5. Conscious intentions likely have physical effects on matter at distance due to the entanglement quantum effect.
6. Materialistic theories for the explanation of consciousness are likely invalid (Neuroscience).
7. Brain is a computer processor and interface between human Consciousness and the external world.

3. The quantum consciousness model and Córdova’s Alien encounter

Antonio Córdova Quezada was born in 1935 in northern Peru. According to Sias (2006), Córdova (now deceased), had in his home 4,000 divine telepathic scrolls and 10,000 divine telepathic orders, contained in 30 notebooks of 200 sheets each; where is written the origin of human consciousness, evolution, cosmology, and future of human life. "Alpha and Omega" is the largest Peruvian group that defends the existence of beings from other planets and has hundreds of followers and even a large headquarters in the Peruvian capital (Sias 2006).

According to this organization, GOD was incarnated three times in a human body: the first was Moses, the second Jesus Christ and the third Luis Antonio Soto, born in 1931 in Chile and who in 1975 arrived in Lima, where for three years he stayed at the home of Córdova. According to Córdova, Soto died and resurrected after the third day and appeared alive in his house after Córdova buried him. All the contacts with Soto were physical face to face although Soto used telepathy to write the "telepathic scrolls", which Córdova defines as "the third and last doctrine or revelation" and which dedicates himself to saving and explaining to those interested (Sias 2006).

Below some of teachings of the telepathic scrolls that relate to the quantum consciousness model (Valverde 2018), table 1 explains the statement that relates to the telepathic scroll teaching and an explanation about how this is related in the third column.

Table 1. Quantum Consciousness Model and Telepathic Scroll teachings

Telepathic Scroll Teachings	Quantum Consciousness Model statements	Explanation
In the past the doctrines of the prophets were received by telepathy; because all things have a beginning and a cause;	6	The consciousness model proposes that materialistic theories are invalid. The doctrine of the telepathic

<p>the Doctrine of the Lamb of GOD, has no end; because the Universe does not have it; and for this reason, it will spread throughout the earth; it will be translated into all the languages of the world; its influence will be such that it will make the materialism fall</p>		<p>scrolls also states that materialism is invalid and most likely to fall after the paradigm of the vision of life has changed.</p>
<p>Each one of your ideas has an intention; and every intention becomes physical and living in the Kingdom</p>	<p>4, 5.</p>	<p>Consciousness is primary when it comes to reality. It is our intentions and ideas that create the reality that we live in.</p>
<p>The human body is the product of magnetic laws; outputs of the macrocosm; and called Divine Laws</p>	<p>1</p>	<p>Our human body is a product of a quantum energy perception that follows a set of universal laws.</p>
<p>The only reality for every spirit, is the eternity that lives; it is not the ephemeral; that he felt when he had a physical body; body of flesh that he requested; and it was granted; granting a physical body is not like granting anything; the body is living that momentarily also requested such physical geometry; and it was granted; the inheritance is the same for everyone; matter and spirit have equal rights; both ask; spiritual laws and material laws merge; known in the Kingdom of Heaven, as the Ark of the Covenants; because the materialization of a spirit, is not done by chance, it is done by responsibly; To say otherwise, is to belittle</p>	<p>3</p>	<p>Consciousness is non-spatial and non-temporal. It can exist outside physical reality.</p>

oneself; and whoever despises himself, the Father despises;		
The most microscopic that your mind can conceive, are your ideas; all your ideas travel physically to space; they have the same right as you; you asked to be born in the matter; they are the same; you asked to live in a time and space; your ideas, equally; WHAT IS ABOVE IS THE SAME AS BELOW;	4	Our ideas are the source of our reality. Human Consciousness is primary for the construction of the reality that we live in.
The universe is infinite; so infinite that all fantasy becomes reality	4,5	Our intentions and our desires are primary in the construction of our reality.
Origin of dreams; dreams are requests made by the spirit; the dream is the journey of living ideas for spaces, times and philosophies, which lived in other existences; Every dream is prophetic because the past, looked at the future; his prophecies are for all present that is lived and is about to be lived.-	2	Our true consciousness lives outside our physical reality and communicates to the physical dimension through intuition embedded in dreams.
The other law is that each one makes his own heaven; and it is thus that the so-called popes and their followers, who nurtured a philosophy of materialistic worship, created their own worlds with such philosophy	4,5	Consciousness is the primary source of reality not only in physical reality but in other realities. Consciousness is multi dimensional.
All materialists are a primitive spirit; that is blinded with a present microscope; even more; they are ignorant of the laws of the	6	Materialism is a minimalistic and simplistic way of explaining consciousness. Consciousness is a complex energy system that follows the

spirit;		quantum paradigm that it is still far from being totally understood.
Of each divine thought left from the Creator, they are formed in instantaneous time, colossal universes that, instant by instant, overcome the already existing universes; At no time is there any limit in the creation of GOD	1	Time is an illusion created in the brain. The realities of the creation are timeless and more linked to the quantum paradigm that reveals that existence and creation is timeless.
The biblical term that what is above is the same as what is below, means that the geometrical above (multi dimensional), makes a single geometrical line with the one below (time and space); and we arrive at the fascinating conclusion, that the whole over the whole of the universe, is a single line, that contains infinite others, in an eternal state of evolution;	1, 2	Consciousness is multidimensional and outside time and space. Time and space is a projection of consciousness that helps the individual to evolve and understand his or her own consciousness in time line that is easier to understand for the primitive consciousness.

4. Conclusions

In this article, a quantum consciousness model with seven principles supported with lab experiments and research is presented and similarities with the teachings of Antonio Córdova Quezada in Peru that explain origin of human consciousness, evolution, cosmology and future of human life are presented and analyzed. The article is meant to open the eyes of the reader to the quantum model of human consciousness that gives us a completely different view of the nature of human consciousness. The article also presents the efforts from non human intelligent beings outside our reality to bring this information to humanity with the purpose of our evolution and better understanding of our origins and nature.
