

Mystical Experience

Encounters with Non-Human Intelligence in Mexico, Spirituality & Complementary Cancer Treatments

Raul Valverde^{*1} & Chet Swanson²

1. Concordia University, Canada
2. Consciousness Research Foundation, USA

Abstract

Recently, several people in Mexico have revealed their encounters with non-human intelligent beings. Many times, these encounters have the purpose of revealing information related to spirituality, consciousness and cosmology. Many of these encounters reveal health treatments with the purpose to supplement their teachings. In this article, one of these treatments is analyzed and presented to the reader. The analyzed complementary medicine treatment is for cancer decrease. The treatment was analyzed in a research pharmaceutical lab and used by few people with positive results. The treatment is based on flower extracts that are meant to harmonize the human body and strengthen its immune system. The article presents results of the lab analysis of this revealed flower extract and presents the testimonials of the people that used this extract. The article has the intention to present non-human intelligence contacts as an attempt of these beings to help us in our evolution process and spiritual growth.

Keywords: Complementary medicine, non-human intelligence, contact, consciousness, cancer research, spiritual growth.

1. Introduction

Cancer is a word applied to different types of abnormal, unhealthy cells that grow in an uncontrolled way in the body's tissues. Cancer causes malignant tumors (abnormal growths) and loss of normal body organ function. Possible signs and symptoms include a lump, abnormal bleeding, prolonged cough, unexplained weight loss, and a change in bowel movements. While these symptoms may indicate cancer, they can also have other causes (Weinberg, 1996; Torpy, Lynn, & Glass, 2010).

Treatment depends on the type of cancer, the organs involved, the extent or spread of the cancer, and the individual's health status. Typical cancer treatments include chemotherapy (powerful medications used to kill the cancer cells), radiation therapy (use of focused x-rays to shrink tumors), surgical procedures (to remove cancerous tissue), blood product transfusions, bone marrow transplantation, and support programs. Palliation (the easing of symptoms) is offered

*Correspondence: Raul Valverde, Concordia University, Canada. E-mail: raul.valverde@concordia.ca

when cancers are incurable. Palliative treatments may include surgery (such as a colostomy to reduce colon blockage or a tracheostomy to help a person breathe more easily), medications, pain treatment, nutritional support (such as enriched liquids or feeding tubes), hospice care, and spiritual and family support (Weinberg, 1996).

For many years, people have reported non-human intelligence encounters in Latin American, in particular in Mexico. Many of these encounters, according to the contactees, are meant to teach us about the origin of human life, spirituality, human consciousness, evolution and cosmic plans (Valverde, 2021). Many of these encounters reveal health treatments with the purpose to supplement their teachings and help us in our spiritual growth. In this article, one of these treatments is analyzed and presented to the public for their own judgement. The analyzed complementary medicine treatment is for cancer decrease. It is not the purpose of this article to present this complementary cancer treatment as something that has been tested with the rigor of clinical trials but as an event that can help to enlighten those interested in the application of natural medicine to cancer treatments and the origin and link of this decrease with human consciousness. The treatment was analyzed in a research pharmaceutical lab and used by few people with positive results. The treatment is based on flower extracts that are meant to harmonize the human body and strengthen its immune system.

2. Non-human Intelligence Contact

Alberto Zecua was born in Mexico City in 1946, he studied Electronic Engineering at the Polytechnic Institute and worked as an engineer in California US during many years before returning to Mexico to start his teaching career as an instructor of consciousness and mind control. Alberto started his teaching career in the city of Tampico, Tamaulipas, where he used to teach mind control courses for the development of consciousness. All this through an Institute of Psychotronics and mind control called "Quetzalcóatl". Alberto Zecua then moved to central Mexico and built a house in the countryside.

Alberto Zecua states that after several years of living in the countryside of central Mexico, he began to experience non-human intelligence contacts and received messages and teachings from various races of extraterrestrials, mainly from non-human intelligence beings from Andromeda. According to Collier (2002), Adromedans, hail from the galaxy of Andromeda and are approximately 43 to 45 hundred years more advanced than we are technologically.

Zecua prepared courses based on the teachings he received and called this knowledge Psychotronics, of which he teaches courses, selectively. Among his teachings, some of the most important below:

- Think before you speak, think before you act, that your actions are in accordance with what you think and what you speak, and do not tell lies.
- We are multidimensional beings. The physical is not the only thing we have. There are other levels or dimensions that we need to develop. Furthermore, there is a Supreme and Guiding Consciousness, which humans call God. This is consistent with the consciousness model proposed by Valverde (2018).
- Gnostics, Rosicrucians, Theosophists and Masons have universal knowledge and apply many principles of Psychotronics and the Universal or Cosmic Laws that the extraterrestrials have taught them, because this knowledge comes from remote antiquity.
- The development of mental and spiritual faculties is developed over several lives (reincarnations).
- Non-human intelligent beings consume synthesized food, which comes from plants. They do not consume animal meat, nor do they agree to harm or sacrifice them, because this is against Universal Laws.
- The non-human intelligent beings instructed him on the proper management of sexual energy, which is similar to what esoteric groups call the awakening of the Kundalini without spilling the semen.
- The human being is taught what he does and what he does not do. Advanced non-human intelligence beings watch us and respect our free will decisions. The limit of this would be that there are celestial mechanisms that are above any individual. Still, non-human intelligent beings intervene by decontaminating rivers, lakes, seas, and other places.
- When you stop talking with your mouth, your mind is activated (telepathy) to communicate. This applies to meditation and silence. Telepathy is the universal way that non-human intelligent beings communicate.
- According to Zecua, the world is a place to take a course called “consciousness”. Over the years, several races have been brought to earth including: Wadoland, Hyperborean, Lemuria, Atlantis, Aryan (Present), Golden (Future).
- Every race has lived about 6,666 years. There is little known about the first two races except that the hyperborean lived-in polar zones. Atlantis was a continent off the coast of what is now the United States. The continent sank as explained in many books including Donnelly (2006).

The author attended the Psychotronics course where Zecua also offered a flower extract as an alternative and complementary treatment for cancer. He says that they are "original" droplets that were originally given to him by non-human intelligent beings as complementary medicine for cancer treatments. The compound is taken by just by smearing 10 diluted drops -in half a glass of water- in the morning (on an empty stomach) and another 10 in the afternoon. or night. According to Zecua, it is a complementary medicine for prostate cancer, head cancer, or throat cancer, as indicated by the non-human intelligent beings.

Flower essences have been used as a healing tool for centuries. The modern usage of these essences, however, began in earnest with the Bach Flowers that were developed in the early 1900s by an orthodox medical practitioner who had become disillusioned with the approach of medical science to disease (Heneka, 2020).

Bach proposes that our soul constantly pushes us towards harmony, and this can lead to balance between the need for connection and courage, choice and resilience, self-love, unconditional love, voice, insight and soul awareness (Mack, 2003). According to Bach, deceases have their origin in the soul and reflected in the body.

An increasing and generally high prevalence of Bach flowers extracts have been used worldwide as complementary for cancer treatments with positive results as documented by Gottschling et. al (2014) and Frass et al. (2015).

3. Complementary Cancer Treatment Lab Analysis

The flower extract for complementary cancer treatment was sent for analysis to a major university in the US and analyzed by a professor of pharmacology. The professor's name and University are kept anonymous for privacy reasons. The results of the analysis of the compound are disclosed below:

- 30-40% of detected compounds was a known pyranocoumarin. These types of compounds exhibit anti inflammatory and anti cancer activity (Barnard et al.2002) (Zhang et al. 2012).
- 10-15% of detected compounds was a known furoquinoline alkaloid. These types of compounds exhibit mutagenic and anti-cancer activity (Kiplimo, Islam & Koorbanally 2011) (Shang et al. 2018).
- 3-5% of detected compounds was a known coumarin. These types of compounds exhibit anti cancer activity (Thakur, A., Singla, R., & Jaitak, V. 2015).

- <1% is a known compound. It is a pharmaceutical drug used to treat depression and anxiety and is a tricyclic antidepressant. This drug approved by the FDA has been identified also as inhibitor of cancer (Jahchan et al 2013).

The results of the analysis present that those compounds found in the blend are already identified as compounds that exhibit anti-cancer activity and are from natural flower plants extracts. The cited articles provide the details of the experiments conducted with these compounds and results that provide evidence of positive results of the use of these compounds.

The blend also includes a pharmaceutical drug that has been already reported as inhibitor of cancer by Jahchan *et. al.* (2013). This drug is for anxiety and depression, research suggests that anxiety and stress may influence the carcinogenic process (Sklar & Anisman, 1981; Nikbakhsh *et. al.*, 2014).

The author offered the flower extract to two people that suffered from cancer. The two people were able to cure from cancer after few months of using the flower extract blend described above. The testimonials with names removed for privacy reasons are provided below only for research purposes:

“I’m 38 years old. At 37, I was diagnosed with non-Hodgkins Lymphoma, stage 4. Within a year, I had exhausted all treatments available for me in Canada and sought additional treatments in the United States. The treatments in the states helped, but the prognosis was still not good. In April 2019, I started immunotherapy as a last resort treatment. Along with the immunotherapy, I started taking the flower extract drops twice a day. Within 2 months, the cancer was in full remission! Were the drops partially responsible for the success? I don’t know for certain but the cancer is gone. I continue to take the drops twice daily and continue with the immunotherapy. I am so grateful at this second chance at life”.

“I had my prostate removed in 2014 due to cancer. They never got it all so I took 33 radiation treatments in October November. I also was taking anti testosterone treatment. I know my treatments were either enhanced or responsible for reducing my psa from .5 to .01 by the addition of two herbal remedies, one provided by Raul Valverde and the other a chaga mushroom remedy”.

The testimonials are not meant to be a clinical trial, however, the author wanted to help these two people and they were presented with this flower extract as complementary medicine for cancer treatment, but they were warned to advice their physicians about the use of this flower extract to avoid any interference with their medical treatments.

These testimonials are far from being significant statistical evidence of the success of this alternative flower extract, but it is presented for the purpose to present to the public the effort of

non-human intelligence beings to help us in our development and introduce to us the use of flowers as potential healers for cancer disease. The presentation of this research also has the purpose to provide direction to those researchers interested in cancer research and complementary treatments with flower extracts.

4. Conclusions

In this article, a complementary cancer treatment revealed by non-human intelligence to contactee Alberto Zecua is analyzed and presented to the research community. These results show that compounds of this flower extract have already been identified as being of anti-cancer value. Flower extracts have been used already for complementary cancer treatments with reported success with the support of testimonials included in this article. The analyzed flower extract was presented to Alberto Zecua by non-human intelligent beings with the purpose to support spiritual and consciousness teachings. Bach flowers have also been used as complementary cancer treatment and with the purpose to teach us about the connection of our souls and our bodies. The article presents the potential of flower extracts as healers to balance our bodies and souls.
